

Battery Recycling Program

Lead acid batteries are the environmental success story of our time since more than 97% of all battery lead is recycled. In fact, lead acid batteries top the list as one of the most highly recycled consumer products. The Safe-Start Battery Recycling Program supports proper recycling of your battery to keep the environment clean.

Please contact us, at recycle@safe-start.com, to learn how to properly recycle your batteries.

Below is the process in which your battery will be recycled:
