**DATA SHEET**

**SOLAR SIND 02 2450**

**MODEL** SIND 02 2450  
**VOLTAGE** 2  
**CAPACITY** 2450Ah @ 100Hr  
**MATERIAL** Polypropylene (internal cell container) Polyethylene (outer container)  
**BATTERY** Deep-Cycle Flooded/Advanced Lead Acid Battery  
**COLOR** Maroon  
**WATERING** Single-Point Watering Kit (Optional)  
**PRODUCT HIGHLIGHTS** Smart Carbon™ for Improved Performance  
17 Years Battery Life Based on IEC 61427

### CHARGING INSTRUCTIONS

**CHARGER VOLTAGE SETTINGS (AT 77°F/25°C)**

- **SYSTEM VOLTAGE**
  - 6V
  - 12V
  - 24V
  - 48V

- **Maximum Charge Current (% of C20 Rate)**
  - 13%

- **Maximum Absorption Phase Time (hours)**
  - 4

- **Absorption Voltage**
  - 7.35
  - 14.70
  - 28.40
  - 58.80

- **Float Voltage**
  - 6.75
  - 13.50
  - 27.00
  - 54.00

- **Equalization Voltage**
  - 8.10
  - 16.20
  - 32.40
  - 64.80

**CHARGING TEMPERATURE COMPENSATION**

- **ADD**
  - 0.005 volt per cell for every 1°C below 25°C
  - 0.0028 volt per cell for every 1°F below 77°F

- **SUBTRACT**
  - 0.005 volt per cell for every 1°C above 25°C
  - 0.0028 volt per cell for every 1°F above 77°F

**OPERATIONAL DATA**

- **OPERATING TEMPERATURE**
  - -4°F to 113°F (-20°C to +45°C).
  - At temperatures below 32°F (0°C) maintain a state of charge greater than 60%.

- **SELF DISCHARGE**
  - 5 – 15% per month depending on storage temperature conditions.

**STATE OF CHARGE MEASURE OF OPEN-CIRCUIT VOLTAGE**

**RECYCLE RESPONSIBLY**

[99% recyclable icon] [2V flooded icon]
**DOD VS CYCLE LIFE IN A STATIONARY APPLICATION**

**EXPECTED LIFE VS. TEMPERATURE**

Chemical reactions internal to the battery are driven by voltage and temperature. The higher the battery temperature, the faster chemical reactions will occur. While higher temperatures can provide improved discharge performance the increased rate of chemical reactions will result in a corresponding loss of battery life. As a rule of thumb, for every 10°C increase in temperature the reaction rate doubles. Thus, a month of operation at 35°C is equivalent in battery life to two months at 25°C. Heat is an enemy of all lead acid batteries, FLA, AGM and gel alike and even small increases in temperature will have a major influence on battery life.

**SMART CARBON™**

Deep-cycle batteries used in off-grid and unstable grid applications are heavily cycled at partial state of charge (PSOC). Operating at PSOC on a regular basis can quickly diminish the overall life of a battery, which results in frequent and costly battery replacements. To address the impact of PSOC on deep-cycle batteries in renewable energy (RE), inverter backup and telecom applications, Trojan Battery has now included Smart Carbon™ as a standard feature in its Solar Industrial and Solar Premium flooded battery lines.

**SELF DISCHARGE VS. TIME**

Provide a periodic freshening charge to maintain a SOC greater than the threshold of 70%.

**PERIODIC CHARGE**

**FREQUENCY**
**BATTERY DIMENSIONS** (shown with IND)

A. The amount of amp-hours (Ah) a battery can deliver when discharged at a constant rate at 86°F (30°C) for all rates and maintain a voltage above 1.75 V/cell. Capacities are based on peak performance.

B. Dimensions may vary depending on type of handle or terminal. Batteries should be mounted with 0.5 inches (12.7 mm) spacing minimum.

C. Height taken from bottom of the battery to the highest point on the battery. Heights may vary depending on type of terminal.

D. Terminal images are representative only.

E. Weight may vary.
